H04N 5/781

TITLE : ELECTRONIC EQUIPMENT

**ABSTRACT :** PROBLEM TO BE SOLVED: To provide electronic equipment with which an image different from a broadcast program can be enjoyed while effectively utilizing the commercial time.

**SOLUTION:** The commercial of stereo broadcasting is detected by a multiplex signal demodulating part 22, and a detected signal Dst is supplied to a control part 50. At the time of commercial, the reproducing operation of a video signal output device 70 is started by a signal CT and until a video signal Vb is outputted from the device 70, a video signal Vm is read out of a video signal memory part 55. Based on select signals SWA and SWB, signal selecting parts 42 and 43 are controlled, the signal to be supplied to a display part 60 is charged from a television signal Va to the signal Vm and after the signal Vb is outputted, the signal Vb is supplied to the display part 60. When the commercial ends, the device 70 is stopped for a prescribed time by the signal CT, the signals Vb from the end of to the stop of device 70 are written in the memory part 55, and the signals in the memory part 55 are updated. The images different from the broadcasting program can be continuously displayed while utilizing the commercial time.
